

ERGABS

Product Description

ERGABS - (Energy Resources Group Anti Bacterial Spray) has a wide range of applications in destroying odor causing bacteria without the use of short term effect chemicals, some of which are not suitable or safe for contact with human skin.

The active ingredient, Tee Tree Oil Concentrate is a non allergenic natural anti-bacterial product, which is able to attach to surfaces, and as it has a slow evaporation rate, it is able to eliminate bacteria growth for a longer period of time than common antiseptic solutions.

A surfactant component in **ERGABS** enables the product to dissolve deposits of decaying matter allowing the natural anti bacterial qualities of the Tee Tree Oil concentrate to achieve full effect.

Used in motor vehicle air conditioners to deodorize the evaporator coil, **ERGABS** is able to clean the evaporator coil fins, and to assist with flushing moist dust and carpet fiber deposits out of the evaporator via the condensate drain hose. The Tee Tree Oil concentrate droplets cling to the surfaces inside the evaporator preventing further bacterial growth for a longer period than other solutions can manage.

The distinctive Tee Tree Oil smell will be strong in the area sprayed for a short time, then it will subside into the background, and continue to do its work for an extended period.

Spray **ERGABS** into shoes and runners, work boots, kitchen bins, and in laundries. In fact, wherever unpleasant odor sources are located, a generous dose of **ERGABS** will handle the problem with confidence.

Cigarette ash trays, car floor mats, and carpets are typical applications.

To spray **ERGABS** into air conditioning evaporators, you need to find a small hole on the air inlet side of the evaporator, then inserting the red plastic straw into the aerosol can valve, you can saturate the inside of the evaporator casing and the evaporator core and fins. Allow a few minutes for the solution to spread over the surfaces, you should then run the air conditioner for some time to allow condensate to form and to flush the dissolved contaminants out through the evaporator drain hose.

ERGABS has natural components which are harmless to the environment.
